SUMMARY

Computer Science student specializing in Software Engineering with academic project experience in backend development, web applications, and applied machine learning prototypes. Built projects using C++, Python, JavaScript, FastAPI, SQLite, PyTorch, and GitHub, including an audio separation prototype that generates separate heart and lung sound outputs from mixed cardiopulmonary recordings. Seeking an internship where I can apply my current skills, learn from experienced teams, and contribute responsibly to real software development work.

PROJECTS

1) Machine Learning-Based System for Cardiopulmonary Sound Separation | Final Year Project, In Progress

Python, FastAPI, PyTorch, SQLite, SQLAlchemy, HTML, CSS, JavaScript

- Developed a FastAPI academic prototype for WAV upload, separation requests, result retrieval, output downloads, and recent job history.
- Integrated a PyTorch-based NeoSSNet inference wrapper to process mixed WAV audio and generate separate heart and lung sound outputs.
- Built a database-backed workflow to store uploaded audio, model configuration, separation jobs, output paths, metrics, and system logs.

2) FalconOCR | In Progress

C++17, CMake, Win32 API, Image Processing, GoogleTest

- Built a from-scratch C++17 OCR prototype without external OCR libraries, with native Win32 GUI support and CLI preview.
- Implemented Otsu binarization, connected-component segmentation, glyph normalization, and template classification.

3) UnlockPDF | Completed

C++17, CMake, Python, Tkinter

- Developed a C++17 PDF password recovery utility for user-owned documents with configurable wordlist-based recovery and worker threads.

EDUCATION

Multimedia University, Cyberjaya Campus | Expected Oct 2027

Bachelor of Computer Science (Hons.), Specialization in Software Engineering

Relevant Coursework: Software Design, Software Requirements Engineering, OOP, Database Systems, Computer Networks, Operating Systems

SKILLS

Frontend: React, JavaScript, HTML, CSS | **Backend:** FastAPI, Python, REST API Development

Languages: C++, Python, JavaScript, HTML, CSS

Databases: SQLite, MySQL, SQLAlchemy

Tools: Git, GitHub, VS Code, Docker, CMake, LaTeX, Overleaf, MS Office, Adobe After Effects

Concepts: OOP, Software Engineering, Software Design, Requirements Engineering, Database Design, Backend Development

Languages:

Arabic (Native)

English (Working Proficiency)
